ADVANCED CHEMISTRY

By JACK G. HUEKELS

There is a lot of entertainment and also a great deal of truth in this story. We recommend it highly.

PROFESSOR CARBONIC was diligently at work in his spacious laboratory, analyzing, mixing and experimenting. He had been employed for more than fifteen years in the same pursuit of happiness, in the same house, same laboratory, and attended by the same servant woman, who in her long period of service had attained the plumpness and respectability of two hundred and ninety pounds.

The electric current lighted up everything in sight!

"Mag Nesia," called the professor. The servant's name was Maggie Nesia—Professor Carbonic had contracted the title to save time, for in fifteen years he had not mounted the heights of greatness; he must work harder and faster as life is short, and eliminate such shameful waste of time as putting the "gie" on Maggie.

"Mag Nesia!" the professor repeated.

The old woman rolled slowly into the room.

"Get rid of these and bring the one the boy brought today."

He handed her a tray containing three dead rats, whose brains had been subjected to analysis.

"Yes, Marse," answered Mag Nesia in a tone like citrate.

The professor busied himself with a new preparation of zinc oxide and copper sulphate and sal ammoniac, his latest concoction, which was about to be used and, like its predecessors, to be abandoned.

Mag Nesia appeared bringing another rat, dead. The professor made no experiments on live animals. He had hired a boy in the neighborhood to bring him fresh dead rats at twenty-five cents per head.

Taking the tray he prepared a hypodermic filled with the new preparation. Carefully he made an incision above the right eye of the carcass through the bone. He lifted the hypodermic, half hopelessly, half expectantly. The old woman watched him, as she had done many times before, with always the same pitiful expression. Pitiful, either for the man himself or for the dead rat. Mag Nesia seldom expressed her views.

Inserting the hypodermic needle and injecting the contents of the syringe, Professor Carbonic stepped back.

Prof. Carbonic Makes a Great Discovery

"Great Saints!" His voice could have been heard a mile. Slowly the rat's tail began to point skyward; and as slowly Mag Nesia began to turn white. Professor Carbonic stood as paralyzed. The rat trembled and moved his feet. The man of sixty years made one jump with the alacrity of a boy of sixteen, he grabbed the enlivened animal, and held it high above his head as he jumped about the room.

Spying the servant, who until now had seemed unable to move, he threw both arms around her, bringing the rat close to her face. Around the laboratory they danced to the tune of the woman's shrieks. The professor held on, and the woman yelled. Up and down spasmodically on the laboratory floor came the two hundred and ninety pounds with the professor thrown in.

Bottles tumbled from the shelves. Furniture was upset. Precious liquids flowed unrestrained and unnoticed. Finally the professor dropped with exhaustion and the rat and Mag Nesia made a dash for freedom.

Early in the morning pedestrians on Arlington Avenue were attracted by a sign in brilliant letters.

Professor Carbonic early in the morning betook himself to the nearest hardware store and purchased the tools necessary for his new profession. He was an M.D. and his recently acquired knowledge put him in a position to startle the world. Having procured what he needed he returned home.

Things were developing fast. Mag Nesia met him at the door and told him that Sally Soda, who was known to the neighborhood as Sal or Sal Soda generally, had fallen down two flights of stairs, and to use her own words was "Putty bad." Sal Soda's mother, in sending for a doctor, had read the elaborate sign of the new enemy of death, and begged that he come to see Sal as soon as he returned.

Bidding Mag Nesia to accompany him, he went to the laboratory and secured his precious preparation. Professor Carbonic and the unwilling Mag Nesia started out to put new life into a little Sal Soda who lived in the same block.

Reaching the house they met the family physician then attendant on little Sal. Doctor X. Ray had also read the sign of the professor and his greeting was very chilly.

"How is the child?" asked the professor.

"Fatally hurt and can live but an hour." Then he added, "I have done all that can be done."

"All that *you* can do," corrected the professor.

With a withering glance, Doctor X. Ray left the room and the house. His reputation was such as to admit of no intrusion.

"I am sorry she is not dead, it would be easier to work, and also a more reasonable charge." Giving Mag Nesia his instruments he administered a local anesthetic; this done he selected a brace and bit that he had procured that morning. With these instruments he bored a small hole into the child's head. Inserting his hypodermic needle, he injected the immortal fluid,

then cutting the end off a dowel, which he had also procured that morning, he hammered it into the hole until it wedged itself tight.

Professor Carbonic seated himself comfortably and awaited the action of his injection, while the plump Mag Nesia paced or rather waddled the floor with a bag of carpenter's tools under her arm.

The fluid worked. The child came to and sat up. Sal Soda had regained her pep.

"It will be one dollar and twenty-five cents, Mrs. Soda," apologized the professor. "I have to make that charge as it is so inconvenient to work on them when they are still alive."

Having collected his fee, the professor and Mag Nesia departed, amid the ever rising blessings of the Soda family.

At 3:30 P.M. Mag Nesia sought her employer, who was asleep in the sitting room.

"Marse Paul, a gentleman to see you."

The professor awoke and had her send the man in.

The man entered hurriedly, hat in hand. "Are you Professor Carbonic?"

"I am, what can I do for you?"

"Can you——?" the man hesitated. "My friend has just been killed in an accident. You couldn't——" he hesitated again.

"I know that it is unbelievable," answered the professor. "But I can."

Professor Carbonic for some years had suffered from the effects of a weak heart. His fears on this score had recently been entirely relieved. He now had the prescription—Death no more! The startling discovery, and the happenings of the last twenty-four hours had begun to take effect on him, and he did not wish to make another call until he was feeling better.

"I'll go," said the professor after a period of musing. "My discoveries are for the benefit of the human race, I must not consider myself."

He satisfied himself that he had all his tools. He had just sufficient of the preparation for one injection; this, he thought, would be enough; however, he placed in his case, two vials of different solutions, which were the basis of his discovery. These fluids had but to be mixed, and after the chemical reaction had taken place the preparation was ready for use.

He searched the house for Mag Nesia, but the old servant had made it certain that she did not intend to act as nurse to dead men on their journey back to life. Reluctantly he decided to go without her.

"How is it possible!" exclaimed the stranger, as they climbed into the waiting machine.

"I have worked for fifteen years before I found the solution," answered the professor slowly.

"I cannot understand on what you could have based a theory for experimenting on something that has been universally accepted as impossible of solution."

"With electricity, all is possible; as I have proved." Seeing the skeptical look his companion assumed, he continued, "Electricity is the basis of every motive power we have; it is the base of every formation that we know." The professor was warming to the subject.

"Go on," said the stranger, "I am extremely interested."

"Every sort of heat that is known, whether dormant or active, is only one arm of the gigantic force electricity. The most of our knowledge of electricity has been gained through its offspring, magnetism. A body entirely devoid of electricity, is a body dead. Magnetism is apparent in many things including the human race, and its presence in many people is prominent."

"But how did this lead to your experiments?"

"If magnetism or motive force, is the offspring of electricity, the human body must, and does contain electricity. That we use more electricity than the human body will induce is a fact; it is apparent therefore that a certain amount of electricity must be generated within the human body, and without aid of any outside forces. Science has known for years that the body's power is brought into action through the brain. The brain is our generator. The little cells and the fluid that separate them, have the same action as the liquid of a wet battery; like a wet battery this fluid wears out and we must replace the fluid or the sal ammoniac or we lose the use of the battery or body. I have discovered what fluid to use that will produce the electricity in the brain cells which the human body is unable to induce."

"We are here," said the stranger as he brought the car to a stop at the curb.

"You are still a skeptic," noting the voice of the man. "But you shall see shortly."

The man led him into the house and introduced him to Mrs. Murray Attic, who conducted him to the room where the deceased Murray Attic was laid.

Without a word the professor began his preparations. He was ill, and would have preferred to have been at rest in his own comfortable house. He would do the work quickly and get away.

Selecting a gimlet, he bored a hole through the skull of the dead man; inserting his hypodermic he injected all the fluid he had mixed. He had not calculated on the size of the gimlet and the dowels he carried would not fit the hole. As a last resource he drove in his lead pencil, broke it off close, and carefully cut the splinters smooth with the head.

"It will be seventy-five cents, madam," said the professor as he finished the work.

Mrs. Murray Attic paid the money unconsciously; she did not know whether he was embalming her husband or just trying the keenness of his new tools. The death had been too much for her.

The minutes passed and still the dead man showed no signs of reviving. Professor Carbonic paced the floor in an agitated manner. He began to be doubtful of his ability to bring the man back. Worried, he continued his tramp up and down the room. His heart was affecting him. He was tempted to return the seventy-five cents to the prostrate wife when—THE DEAD MAN MOVED!

The professor clasped his hands to his throat, and with his head thrown back dropped to the floor. A fatal attack of the heart.

He became conscious quickly. "The bottles there," he whispered. "Mix—, make injection." He became unconscious again.

The stranger found the gimlet and bored a hole in the professor's head, hastily seizing one of the vials, he poured the contents into the deeply made hole. He then realized that there was

another bottle.

"Mix them!" shrieked the almost hysterical woman.

It was too late, the one vial was empty, and the professor's body lay lifeless.

In mental agony the stranger grasped the second vial and emptied its contents also into the professor's head, and stopped the hole with the cork.

Miraculously Professor Carbonic opened his eyes, and rose to his feet. His eyes were like balls of fire; his lips moved inaudibly, and as they moved little blue sparks were seen to pass from one to another. His hair stood out from his head. The chemical reaction was going on in the professor's brain, with a dose powerful enough to restore ten men. He tottered slightly.

Murray Attic, now thoroughly alive, sat up straight in bed. He grasped the brass bed post with one hand and stretched out the other to aid the staggering man.

He caught his hand; both bodies stiffened; a slight crackling sound was audible; a blue flash shot from where Attic's had made contact with the bed post; then a dull thud as both bodies struck the floor. Both men were electrocuted, and the formula is still a secret.

Section 2. Information about the Mission of Project Gutenberg-tm

Project Gutenberg-tm is synonymous with the free distribution of electronic works in formats readable by the widest variety of computers including obsolete, old, middle-aged and new computers. It exists because of the efforts of hundreds of volunteers and donations from people in all walks of life.

Volunteers and financial support to provide volunteers with the assistance they need, is critical to reaching Project Gutenberg-tm's goals and ensuring that the Project Gutenberg-tm collection will remain freely available for generations to come. In 2001, the Project Gutenberg Literary Archive Foundation was created to provide a secure and permanent future for Project Gutenberg-tm and future generations. To learn more about the Project Gutenberg Literary Archive Foundation and how your efforts and donations can help, see Sections 3 and 4 and the Foundation web page at <https://www.pgla.org>.

Section 3. Information about the Project Gutenberg Literary Archive Foundation

The Project Gutenberg Literary Archive Foundation is a non profit 501(c)(3) educational corporation organized under the laws of the state of Mississippi and granted tax exempt status by the Internal Revenue Service. The Foundation's EIN or federal tax identification number is 64-6221541. Its 501(c)(3) letter is posted at <https://pglaf.org/fundraising>. Contributions to the Project Gutenberg Literary Archive Foundation are tax deductible to the full extent permitted by U.S. federal laws and your state's laws.

The Foundation's principal office is located at 4557 Melan Dr. S. Fairbanks, AK, 99712., but its volunteers and employees are scattered throughout numerous locations. Its business office is located at 809 North 1500 West, Salt Lake City, UT 84116, (801) 596-1887, email business@pglaf.org. Email contact links and up to date contact information can be found at the Foundation's web site and official page at <https://pglaf.org>

For additional contact information:

Section 4. Information about Donations to the Project Gutenberg Literary Archive Foundation

Project Gutenberg-tm depends upon and cannot survive without wide spread public support and donations to carry out its mission of increasing the number of public domain and licensed works that can be freely distributed in machine readable form accessible by the widest array of equipment including outdated equipment. Many small donations (\$1 to \$5,000) are particularly important to maintaining tax exempt status with the IRS.

The Foundation is committed to complying with the laws regulating charities and charitable donations in all 50 states of the United States. Compliance requirements are not uniform and it takes a considerable effort, much paperwork and many fees to meet and keep up with these requirements. We do not solicit donations in locations where we have not received written confirmation of compliance. To SEND DONATIONS or determine the status of compliance for any particular state visit <https://pglaf.org>

While we cannot and do not solicit contributions from states where we have not met the solicitation requirements, we know of no prohibition against accepting unsolicited donations from donors in such states who approach us with offers to donate.

International donations are gratefully accepted, but we cannot make any statements concerning tax treatment of donations received from outside the United States. U.S. laws alone swamp our small staff.

Please check the Project Gutenberg Web pages for current donation methods and addresses. Donations are accepted in a number of other ways including including checks, online payments and credit card donations. To donate, please visit: <https://pglaf.org/donate>

Section 5. General Information About Project Gutenberg-tm electronic works.

Professor Michael S. Hart was the originator of the Project Gutenberg-tm concept of a library of electronic works that could be freely shared with anyone. For thirty years, he produced and distributed Project Gutenberg-tm eBooks with only a loose network of volunteer support.

Project Gutenberg-tm eBooks are often created from several printed editions, all of which are confirmed as Public Domain in the U.S. unless a copyright notice is included. Thus, we do not necessarily keep eBooks in compliance with any particular paper edition.

Most people start at our Web site which has the main PG search facility:

<https://www.gutenberg.org>

This Web site includes information about Project Gutenberg-tm, including how to make donations to the Project Gutenberg Literary Archive Foundation, how to help produce our new eBooks, and how to subscribe to our email newsletter to hear about new eBooks.
